## Watch It Grow!

### Directions:

After your seed roll-up sprouts, plant one sprout in a clear plastic cup filled  $\frac{3}{4}$  with soil. Record your plant's growth on this *Measure & Mark Graph*. Use nonstandard tools such as a piece of yarn or a green paper strip to measure your plant's growth from the soil line. Cut just that much yarn or tear only that amount of paper. Attach the growth marker with tape to the day marked. Track your plant's growth spurts!
